Consumer brands, clearly expressed.

Three self-initiated case studies connecting brand identity, packaging, digital commerce, social content and motion.

01	NIVA	Brand identity + packaging
02	EMBER	Website design + development
03	ZEST	Social strategy + motion

Fictional concepts created with AI assistance. No client affiliation, actual campaign performance or consumer-research findings are claimed.

NIVA / Space to reset.

THE BRIEF

Create an approachable premium skincare concept for people overwhelmed by complicated routines. The visual system should feel calm, legible and coherent across a shelf, a feed and a small mobile screen.

AUDIENCE HYPOTHESIS

Working adults looking for a simple daily routine. This is a target-audience hypothesis, not a finding from customer interviews.

DECISIONS

One recognizable wordmark

A lowercase serif wordmark balances familiarity with a considered, premium tone. The full stop becomes a small recurring identity device.

Muted shelf presence

Forest, sage and clay create a restrained hierarchy. Dark forest carries essential copy; lighter tones distinguish formats.

A ritual, not a claim

Launch copy speaks about routine and simplicity. It avoids clinical efficacy claims that cannot be substantiated.

DELIVERED

Identity board, three packaging form studies, 1080 × 1350 launch creative, editable SVG sources and PNG previews.

The identity in context.

01 / BRAND IDENTITY

niva.

Less noise. More ritual.

N

SPACE
TO RESET.

FOREST

SAGE

CLAY

SELF-INITIATED CONCEPT / SKINCARE

Original editable SVG artwork with PNG previews. Packaging and product labels are illustrative concepts.

From system to touchpoint.

niva.

Make room
for less.

One considered ritual.

Explore the concept collection →

REVIEW + REFINEMENT

Contrast review: clay labels and forest caps separate the packaging from the sage background. Large ritual naming supports recognition when the artwork is viewed as a thumbnail. Consumer readability testing remains proposed.

NEXT VALIDATION STEP

Review with five target consumers, test mobile readability and compare relevant category brands. Validate assumptions before production or a live launch.

PRODUCTION HANDOFF

Confirm supplier dielines, label requirements, materials and print color specifications before producing real packaging. Concept artwork is not print-ready packaging.

EMBER / Good coffee. Great mornings.

THE BRIEF

Design a D2C coffee storefront that supports a quick first purchase. Clarify roast selection, show price and pack size near the action, and keep the shopping journey usable on mobile.

AUDIENCE HYPOTHESIS

Home coffee drinkers comparing a small range of blends. All products, prices and tasting notes are illustrative prototype content.

DECISIONS

A clear entry point

A single hero action leads to the coffee range. The first screen communicates the category and the reason to explore.

Choices before complexity

Three blends expose tasting notes, roast and pack size in parallel. Details stay close to the purchase action.

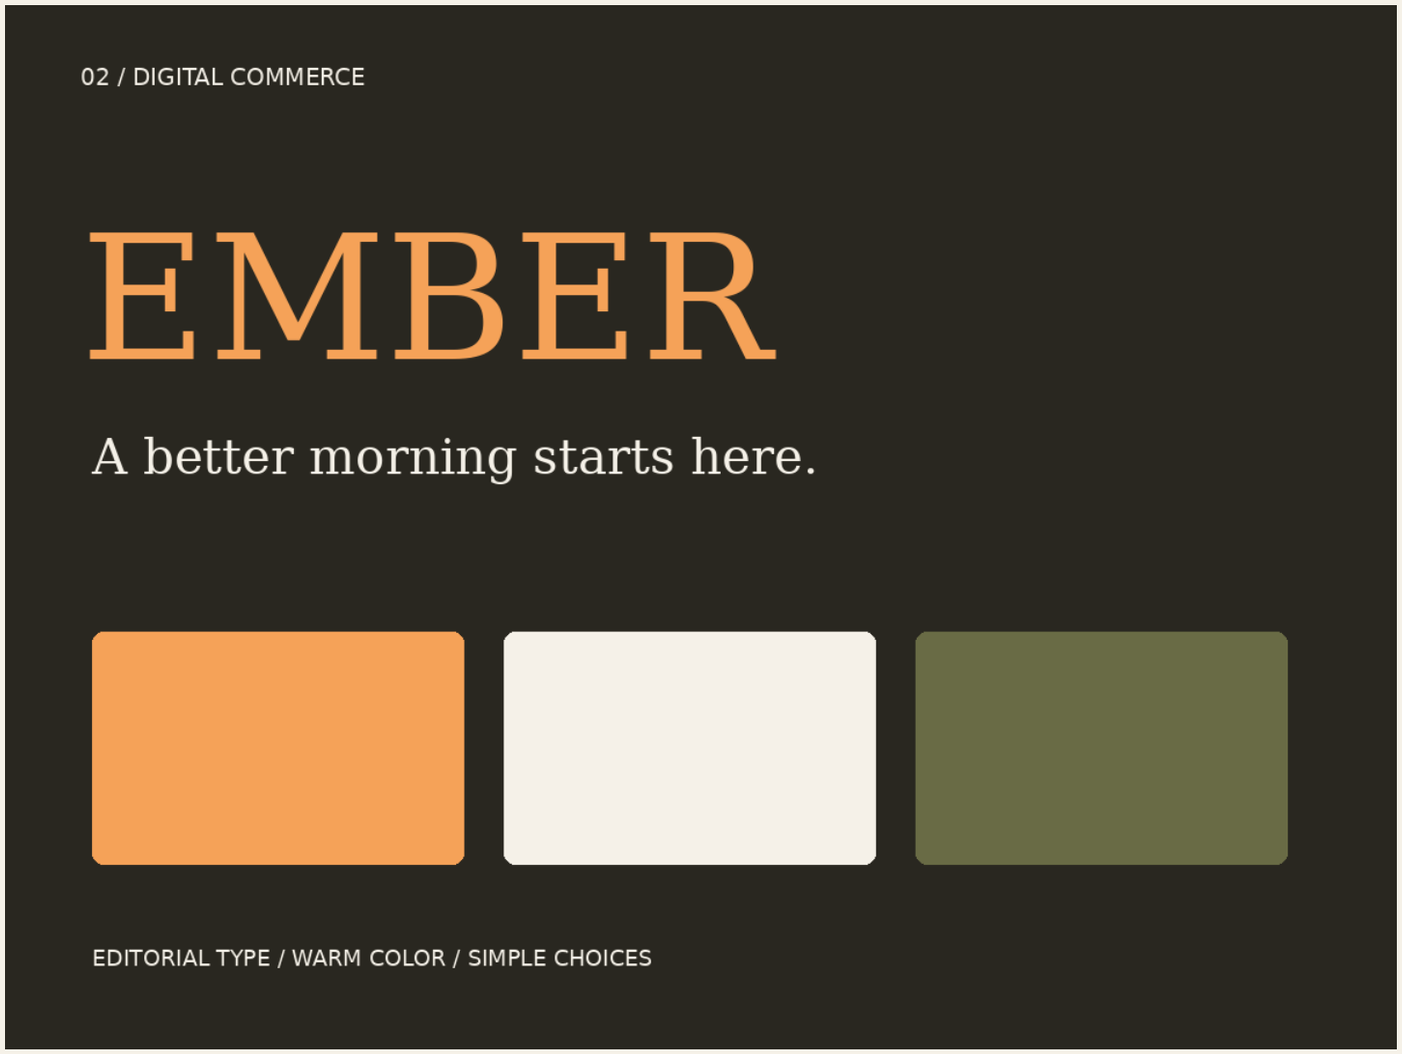

Visible cart feedback

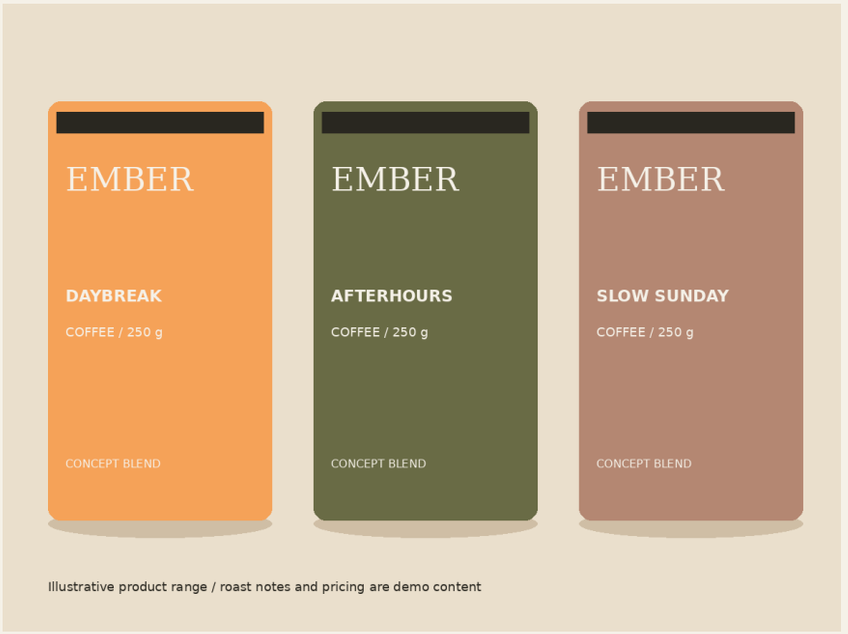

Adding an item updates the bag count and an announced status message. Quantity controls and removal allow recovery from mistakes.

DELIVERED

Identity board, product-range illustration, responsive storefront, roast filter and functional demo cart with quantity controls. No payments, orders or customer data.

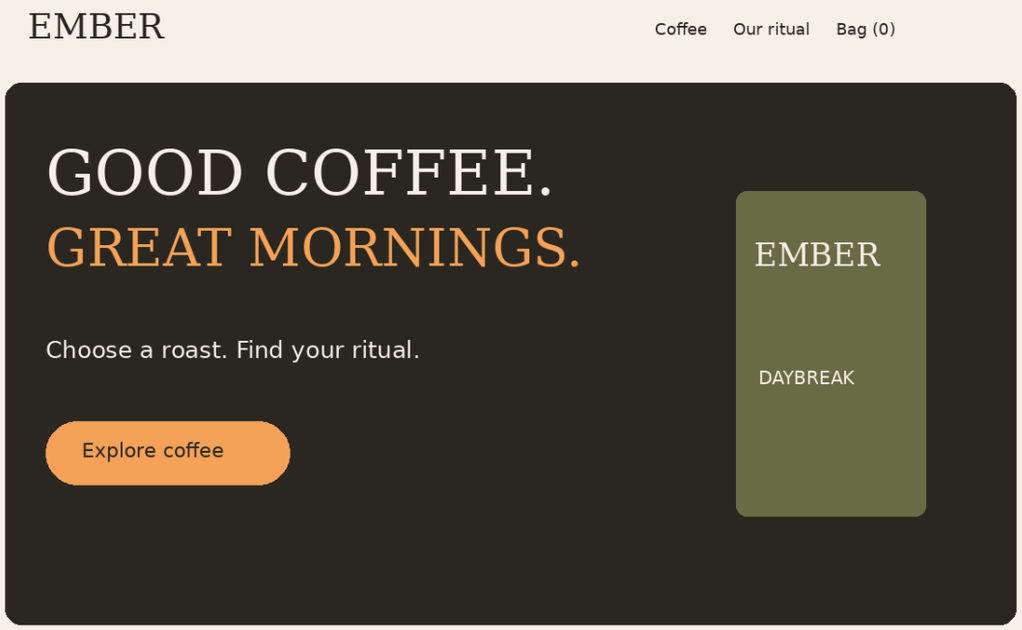

The identity in context.

Original editable SVG artwork with PNG previews. Packaging and product labels are illustrative concepts.

From system to touchpoint.

A responsive storefront prototype with a functional demo cart

REVIEW + REFINEMENT

Hierarchy review: the implemented prototype gives the range its own anchor and keeps the bag accessible from the hero. Mobile cards stack into a single column. A future usability test should check roast comparison and cart recovery.

NEXT VALIDATION STEP

Review with five target consumers, test mobile readability and compare relevant category brands. Validate assumptions before production or a live launch.

FUNCTIONAL PROTOTYPE

Responsive HTML/CSS/JavaScript storefront with roast filtering, cart quantity controls and a demo completion action. No checkout or payment integration.

ZEST / Break the boring break.

THE BRIEF

Introduce a fictional snack brand through a modular launch campaign. Build recognition through repeated typography and color, then move from a familiar break-time problem toward product discovery.

AUDIENCE HYPOTHESIS

Students and early-career adults encountering snack brands on mobile. Break-time relevance is a creative hypothesis requiring validation.

DECISIONS

One campaign idea

Break the boring break gives each asset the same organizing idea while allowing different hooks.

A three-stage sequence

The first creative establishes the 3 PM problem, the second introduces the brand idea, and the third invites discovery.

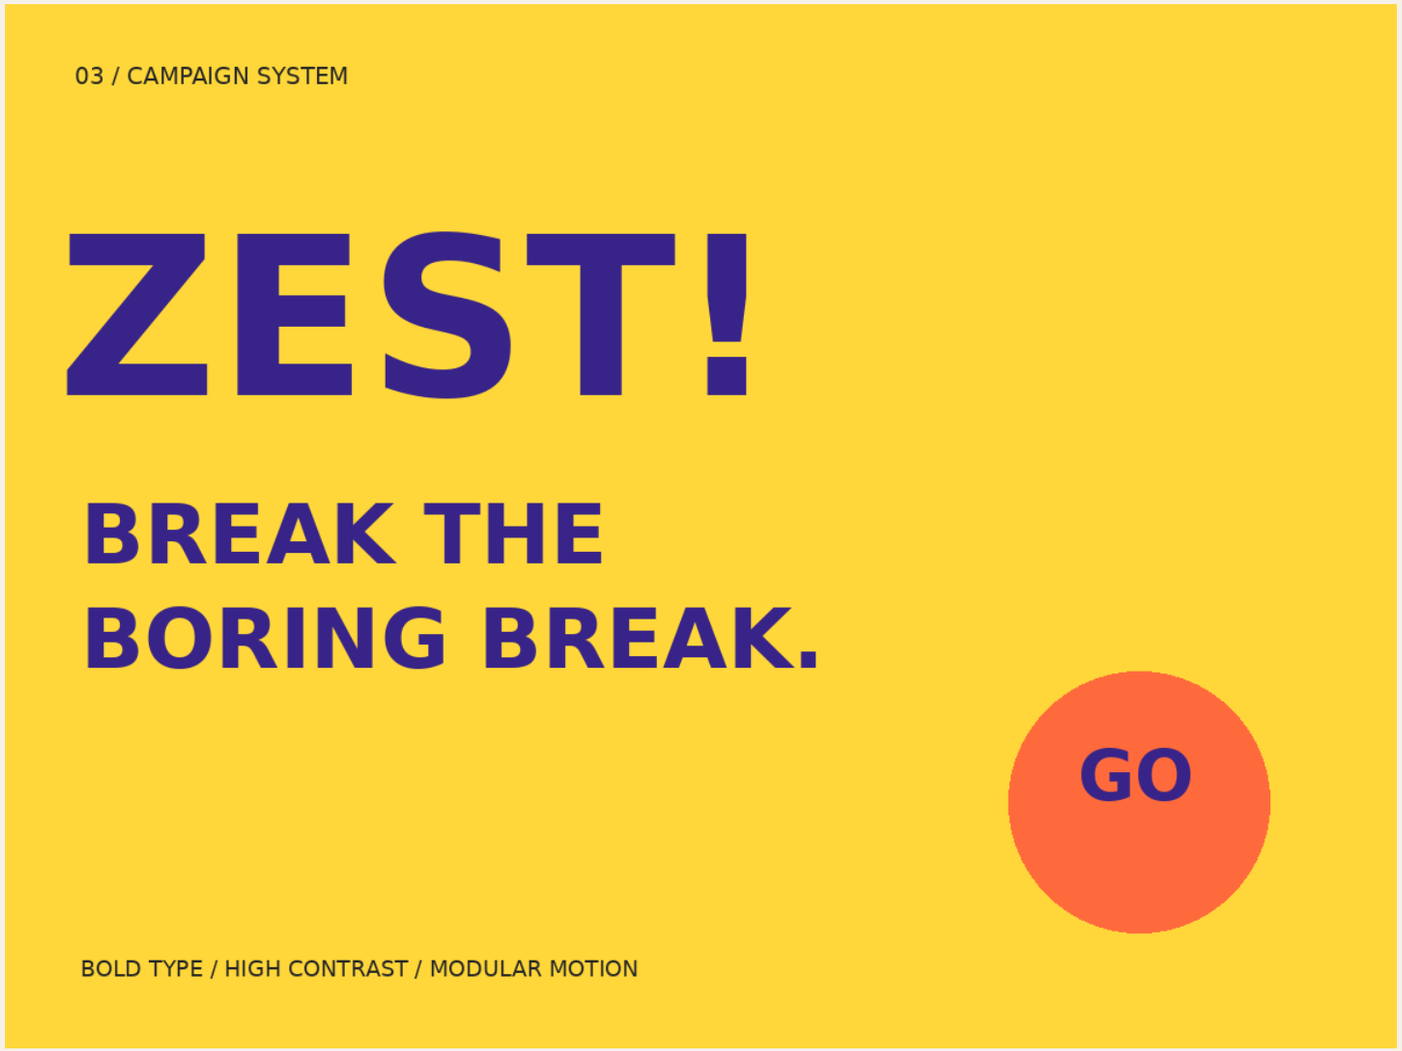

A flexible visual grammar

Oversized type, three solid colors and one pack silhouette adapt to 4:5 feed and 9:16 story formats.

DELIVERED

Campaign identity board, three 1080 × 1350 creatives, one 1080 × 1920 story, nine-second MP4 reel, storyboard, two-week content plan and experiment brief.

The identity in context.

Original editable SVG artwork with PNG previews. Packaging and product labels are illustrative concepts.

From system to touchpoint.

REVIEW + REFINEMENT

Placement review: short occasion-led hooks keep the campaign readable on mobile. The story variant places the CTA in a lower-middle safe area. Platform-specific overlays should be checked before paid placement.

NEXT VALIDATION STEP

Review with five target consumers, test mobile readability and compare relevant category brands. Validate assumptions before production or a live launch.

MOTION + STRATEGY

Delivered: a nine-second silent MP4 reel and two-week content plan. Proposed: controlled hook testing with CTR and conversion guardrails. No live results are reported.
